OBJECTIVE

Software Engineer with 2+ years of experience across backend development and GenAI systems. Strong background in Java Spring Boot for large-scale application and Python/FastAPI for AI-powered solutions. Seeking a role that combines scalable backend engineering with applied AI solutions.

SKILLS

Technical Skills	Java, Spring Boot, Postgresql, Jmeter, Kafka, Jboss, Wildfly, Spring Security, Python, FastAPI, DynamoDB, Lambda, LangChain, LangGraph HTML, Javascript, Css, Angular, React, Git, Lambda, Postman
Soft Skills	Team Collaboration, Leadership, Problem Solving, Active Learning, Communication
Languages	English, Malayalam, Tamil

EXPERIENCE

Spring Boot Developer	2024 - Present
Tata Consultancy Services (TCS)	Kochi, Kerala

PROJECTS :

Telematics and Driver Scoring Platform (Backend + Admin Portal)

- Developed and maintained a high-throughput telematics backend to ingest real-time trip data from mobile devices, process driving behavior, and generate driver scores.
- Designed and implemented Spring Boot microservices to handle trip ingestion, validation, persistence, and downstream processing.
- Integrated Apache Kafka for reliable, asynchronous streaming of trip events to Big Data systems for large-scale analytics.
- Worked extensively with PostgreSQL (AWS RDS) for transactional data storage, query optimization, and data maintenance in production.
- Led deployment, configuration, and runtime management of Spring Boot applications on RHEL with JBoss EAP hosted on AWS EC2 using Jenkins.
- Supported production operations including performance tuning, log analysis, issue triage, and scheduled job stability.
- Contributed to an AngularJS-based admin portal enabling: User and driver management, Real-time dashboards and reports, Configuration of scoring logic and system parameters

GenAI Contact Centre Assistant (Backend + AI Systems)

- Built backend APIs using FastAPI (Python) for a GenAI-powered contact centre assistant used by customer support executives.
- Designed and implemented agent workflows using LangGraph, enabling multi-step reasoning and dynamic decision-making.
- Integrated LLMs to provide: Live conversation assistance based on real-time transcripts, Follow-up question suggestions and response guidance, Detection of slang, ambiguous, and complex customer language
- Implemented dynamic data retrieval from DynamoDB to fetch customer profiles, interaction history, and contextual metadata during live calls.
- Integrated a knowledge base for company terms, policies, and FAQs to deliver accurate, context-aware responses.

- Developed features for competitor analysis, enabling agents to respond effectively to comparison-based customer queries.
- Automated form auto-filling and recommendation workflows, reducing manual effort for contact centre executives.

EDUCATION

Master of Computer Application , Mar Athanasius College of Engineering	2021 - 2023
Relevant Coursework: Java, Deep Learning, Machine Learning, and SQL.	
Bachelor of Computer Science , University of Calicut	2018 - 2021

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate**
- Introduction to Operating System** - IIT Madras
- Data Base Management System** - IIT Kharagpur
